

SILICON POWER™ Announces Major Brand Name – Model Specific Memory Module Series

March 23, 2009

(Taipei, Taiwan) Silicon Power officially announces Model Specific Memory Series for use on major brand name PCs such as Acer, ASUS, HP, IBM, Mac, DELL, FUJITSU, TOSHIBA, NEC, etc for ultimate compatibility. The Model Specific Memory module is available in desktop, laptop and server computer variants corresponding to various computer models. When a new brand name computer model is released, Silicon Power™ will analyze the newly released model and carefully pick the flash module that will be used to produce the memory modules for this new model. The end result is a memory module specifically produced for your computer model that has been through stringent compatibility and stability tests.

Choosing Silicon Power's Model Specific Memory module is the way to go when it comes to brand name computers. To squeeze every last drop of potential out of your computer, users can match their brand name computer model to a Silicon Power Model Specific Memory for ultra stability and maximum compatibility!

Silicon Power's Model Specific Memory Series is customer oriented and meets the needs of customers. For the ease of customers, Silicon Power has hosted a site to search for a Model Specific Memory that is dedicated for your computer. Entering

your corresponding computer model number, the search engine will give you a Silicon Power Model Specific Memory that is right for you without the hassle of testing and worrying about compatibility issues yourself. In addition to the search engine site, should you come across any other memory related issues, please do not hesitate to contact Silicon Power's TechSupport.
