

Vision Objects is proud to announce the release of its brand new note management application: MyScript Studio

Nantes, February 19, 2009. MyScript Studio is a new note management application developed by Vision Objects which aims at helping people to store, find and share information.

The application detects and stores any note originating from a writing device as soon as it is connected to the computer. Once the new "ink files" are detected, they are automatically available in a default folder. Users can then organize their notes as well as in physical entities (notebooks, binders, sheets, ...) than using logical tags.

Provided with a unique and powerful search engine, MyScript Studio owners will be able to find any information they are looking for in their handwritten notes in one simple click.

Vision Objects could have stopped here, but the company wished to provide the user with a an equaled product.

Thus, users can edit text : deleting information, removing unsightly corrections or adding text and shapes for instance. Moreover, with MyScript Studio Notes Edition, people can convert their notes into digital text they can modify and send via email or export into Word and other applications as plain text.

Vision Objects is dedicated to value handwritten documents. "Thanks to MyScript Studio, users of digital pens and writing devices will value the time spent to write far beyond conversion to Text, and so will save precious time and money, this application will quickly become for them an essential companion for the effective management of their digital notes!", said Jean-Marc Aïchoun, VP Sales and Marketing at Vision Objects.

About Vision Objects

Vision Objects provides the industry standard in Handwriting Recognition Technology and Text Input Methods for pen-based user interfaces. Vision Objects' ground-breaking MyScript Technology reliably recognizes and converts handwriting into smart, valuable and searchable digital information. MyScript is available in a wide range of languages addressing markets in the Americas, Europe and Asia Pacific. MyScript is integrated into many existing systems for high level form processing, personal information management, messaging, education and automotive applications. Vision Objects' mission is to develop and market accurate and high performance Handwriting Recognition & Understanding software for any platform using handwritten data entry through pen-based user interfaces such as Digital Pens, PDAs, Tablet PCs and Smartphones.
