## New 4 Port CAN card available

The cost efficient CAN PCI card convinces with extremely reduced access time

COSATEQ developed a new CAN-PCI card with 4 active ports ready to connect 4 independent networks. Hardware, Firmware and drivers are optimized for the special use in real-time simulation environments. The card is also able to handle tasks in other areas of application, e.g. controlling or monitoring.

CO-PCICAN/4 comes with 4 electrical isolated CAN channels. Each channel reaches up to 1 Mbaud/s. The two integrated 32-Bit-processors reduce access-time and increase the cards performance compared to assimilable cards – and just at 1200,- Euro (Juni 09). Our CANPCI card certainly contains switchable termination resistors for each channel.
