

SHINE and SHARE with SAPPHIRE!

SAPPHIRE Mini Projector 101 shows videos from PC or iPhone*

SAPPHIRE Technology, the No.1 brand worldwide for graphics cards based on ATI technology from AMD, has just launched an exciting new product that will appeal to a wide range of users, young and old, private and professional.

The SAPPHIRE Mini Projector 101 is a pocket sized projector that packs an image punch way above its tiny weight. Taking graphics input from any PC or laptop, video from any digital camera or media source, or connecting directly with an adapter to iPod and iPhone, the Mini Projector can cast an image from 7 inches across up to 65 inches across on a suitable surface.

Share those pictures with mates - without them squinting at a tiny screen on your 'phone! Stream those YouTube videos onto your wall! Watch those TV programs you missed, anywhere! Show business colleagues your visual ideas for a campaign without the need for a media equipped meeting room! The possibilities are endless ...

Based on the latest super bright multi-chip LED technology, the lamp in the SAPPHIRE Mini Projector is good for 20,000 hours – no worries about changing bulbs then! And you don't need to sit in the dark, either, the SAPPHIRE Mini Projector lamp is rated at 14 lumens – giving good image quality at 640 x 480 resolution in normal or slightly subdued room lighting. Battery life is good too – over 2 hours on a single charge, good enough for all those holiday photos or a whole movie – or you can run direct from the adapter/charger.

Truly pocket sized, the SAPPHIRE Mini Projector 101 weighs only 103 grams, and a protective slide covers the lens to avoid damage in transit or when not in use. The package is complete with charger, tripod, video leads for PC VGA, composite video (digital cameras and some 'phones) and an approved iPod / iPhone adapter.

So just plug in and play – shine and share ! . Full specifications and details available at www.sapphiretech.com
