## Brocade Collaborates with VMware to Provide Intelligent and Powerful SAN Analytics for Cloud Environments

*Brocade Fabric Vision Technology Interoperates with VMware vCenter™ Log Insight™ 2.0 to Help Reduce IT Costs by Improving Operational Efficiency*

**San Jose, CA— May 20, 2014:** [Brocade](#) (NASDAQ: BRCD), the leader in fabric networking solutions, today announced that the company has collaborated with VMware to provide intelligent and powerful analytics capabilities for Fibre Channel Storage Area Networks (SANs) supporting cloud environments using VMware vCenter™ Log Insight™ 2.0, which was also [announced today](#).

VMware vCenter Log Insight can deliver real-time insights and monitoring of data from applications, virtualized infrastructure and physical hardware to help improve operational efficiency through automation and simplify IT troubleshooting. VMware vCenter Log Insight delivers the performance and scalability required by IT organizations for visualizing and analyzing multi-terabyte datasets.

The new Brocade® SAN Content Pack adds important functionality for Brocade environments in VMware vCenter Log Insight 2.0. It uses Brocade Fabric Vision technology to enhance the innovative machine-learning functionality and improved query and data collection capabilities to provide systems administrators with a complete view of SAN health and behavior across physical, virtual and hybrid cloud environments.

“Because IT infrastructures generate massive numbers of alerts on a daily basis, understanding which ones are truly meaningful is typically a manual, painstaking, and time-consuming process that can create inefficiencies,” said Jack Rondoni, vice president, Data Center Storage and Solutions, at Brocade. “Administrators can use tools like Brocade SAN Content Pack and VMware vCenter Log Insight 2.0 to effectively manage the shifting infrastructure patterns typical of modern data centers. This enables IT to fine-tune their environment via more effective root-cause analysis and visibility, enabling more efficient IT operations.”

[Brocade Fabric Vision technology](#) with VMware vCenter Log Insight enables a significant improvement over prior generations of analytics solutions that have attempted to use complicated heuristics and rigid algorithms to improve the signal-to-noise ratio for dealing with vast oceans of log data. This provides deeper knowledge of SAN behavior to increase visibility about a variety of issues impacting VM performance and application responsiveness.

The Brocade SAN Content Pack can automatically deliver data to Log Insight to quickly present the most relevant log data within the context of VMware Log Insight Manager. This approach can significantly reduce the overall mean-time to problem identification. Users are offered predefined dashboards, queries, alerts, and fields that can also be customized to specific environments. SAN events are intelligently classified and filtered to weed out volumes of excess or less-meaningful data that can inhibit quick responsiveness in maintaining SAN fabric uptime.

“Brocade’s achievements in simplifying and automating SAN fabrics align with VMware’s design goals for VMware vCenter™ Log Insight™ 2.0,” said Sajai Krishnan, vice president, Product Marketing, Cloud Management Business Unit, VMware. “This builds on a number of areas of collaboration between Brocade and VMware, further demonstrating the value we are jointly delivering to the most advanced data centers.”

### **Availability and Pricing**

The Brocade SAN Content Pack is available now at no charge and can be downloaded from the Log Insight Marketplace on the VMware Solution Exchange at:

<https://solutionexchange.vmware.com/store/loginsight>

### **About Brocade**

Brocade (NASDAQ: BRCD) networking solutions help the world’s leading organizations transition smoothly to a world where applications and information reside anywhere. ([www.brocade.com](http://www.brocade.com))
